Atmospheric forecast for tomorrow: Hazy sunshine for a prolonged period of time.

Peculiar observation:

- Yesterday's maximum temperature was 41.3°C & minimum temperature was 27.2°C with maximum & minimum relative humidity as 57 % & 33% respectively.
- Rainfall in an erratic manner is likely to occur between June 2, 2019 & June 11, 2019. Also, morning thunderstorm is likely to hit Gorakhpur between June 8, 2019 & June 11, 2019.
- Wind gust is likely to hit Gorakhpur with maximum speed ranging between 25 kmph to 42 kmph from May 30, 2019 till June 11, 2019.
- Heat wave conditions are likely to be considered in Gorakhpur for the duration between May 31, 2019 till June 7, 2019.

Precautionary measures for citizens of Gorakhpur: There are greater chances for formation of photochemical smog in summer as they require sizzling sunshine & dry climate for reaction of unsaturated hydrocarbon with nitrogen oxide leading to the formation of suspended particulate matter, which are highly dangerous to health.

- Minimize the exposure of children to open atmosphere when the atmosphere is exposed to peak traffic as the pollution during the same can adversely affect their health.
- For moderate workers/ salespersons/ officials working in open atmosphere or offices not equipped with A.C should have intake of 3.0-3.5 liters of water per day, to avoid dehydration & persons following a sedentary lifestyle should have intake of 2.5-3.0 liters of water per day, to avoid dehydration
