Atmosphere of tomorrow: Hazy Sunshine for prolonged period of time

Peculiar observation:

- Yesterday's maximum temperature was 38.4°C & minimum temperature was 25.7°C with maximum & minimum relative humidity as 53% & 39% respectively.
- Rainfall is likely to happen in Gorakhpur in the end of second week of June 2019, nearly by June 12 or in third week of June, 2019 & this rainfall may continue to happen for the next 6-7 days in an erratic manner.
- Wind gust is likely to hit Gorakhpur with the maximum speed ranging between 25 kmph to 38 kmph from June 5, 2019 till June 12, 2019 & is expected to blow with nearby speed of 40 kmph between June 10, 2019-June 12, 2019.

Precautionary measures for citizens of Gorakhpur: There are greater chances for formation of photochemical smog in summer as they require sizzling sunshine & dry climate for reaction of unsaturated hydrocarbon with nitrogen oxide leading to the formation of suspended particulate matter, which are highly dangerous to health.

- Minimize the exposure of children to open atmosphere when the atmosphere is exposed to peak traffic as the pollution during the same can adversely affect their health.
- For moderate workers/ salespersons/ officials working in open atmosphere or offices not equipped with A.C should have intake of 3.0-3.5 liters of water per day, to avoid dehydration & persons following a sedentary lifestyle should have intake of 2.5-3.0 liters of water per day, to avoid dehydration
