Peculiar observations of Climate Cell:

- Yesterday's (August 25, 2019) maximum & minimum temperature recorded by Climate Cell of Gorakhpur is 32.2°C & 25.8°C respectively with the maximum & minimum relative humidity as 77 % 72 %. Maximum speed of wind gust recorded was 16.1 km/h with dominated wind direction as ENE.
- Light to moderate rainfall is likely to occur in the ending 1-2 days of August 2019 & on September 1, 2019.

Precautionary measures for citizens of Gorakhpur for next 1 week:

- Lightning seeks the highest ground, so if indoor shelter is not available, crouching down in the nearest, lowest & unexposed point is a better bet majorly during cloudy & rainy hours till the storm gets completed.
- Tents & pavilions found inside/near parks are not good option to stay during thundershower.
- Try to stay indoors with closed windows & minimal usage of electric appliances during the rainy & stormy hours and if outdoor then choose an open ground at lower elevation-that too away from water body & tall or metallic structures.
- Stay in a safe place and away from the haggard trees or heavy & loose objects lying in an open atmosphere during thundershower.
- Plan for the outdoor work execution when there is no or minimal presence of cloud in the sky & do take necessary things to stay safe from the stormy winds, heat waves & rainfall. Avoid moving out of the abode for least significant work & if moving, then do remember all the precautionary measures as instructed above for lightning, rainfall & storm.
