1. Location Based Information dissemination Feeds

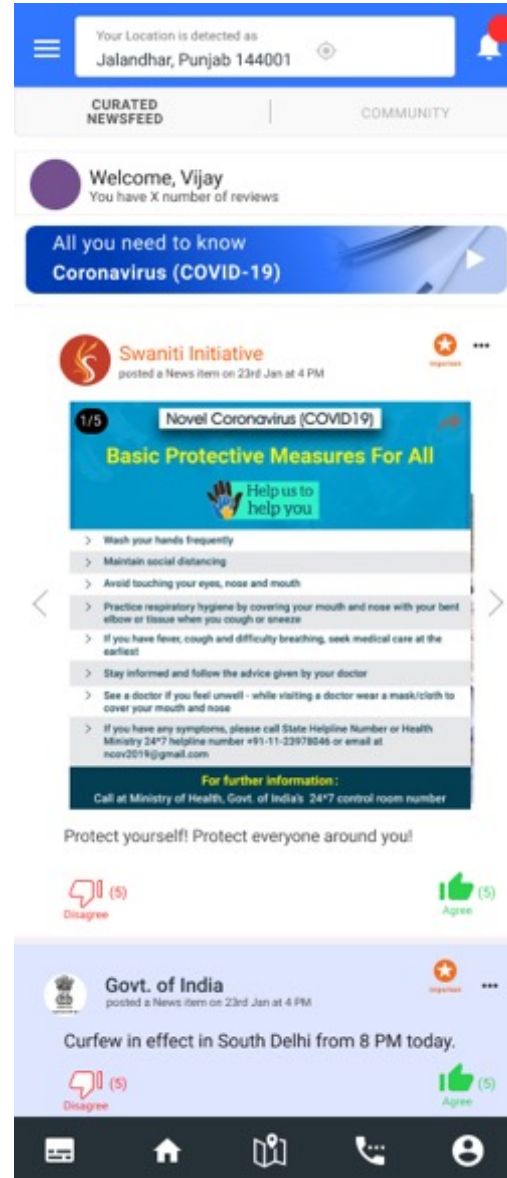

Curated feeds:

Controlled by local administration and delivered based on location to relevant users. DM can send out information to people in his/her district. State secretary can send to all people in the state. Local body officer can send to the local community within 1.5 km radius

Community feeds:

Peer to peer help and information sharing based on location to people in your locality. System will automatically filter and moderate any obscene content and there is an approval mechanism for community feed to ensure no misinformation spreads.

Curated feeds:

Community feeds:

2. Location based Emergency Services and Hospitals Information

Search Local hospitals, COVID centers, Kendriya Bhandar etc.:

Local search including facilities and ability for user to review and provide feedback.

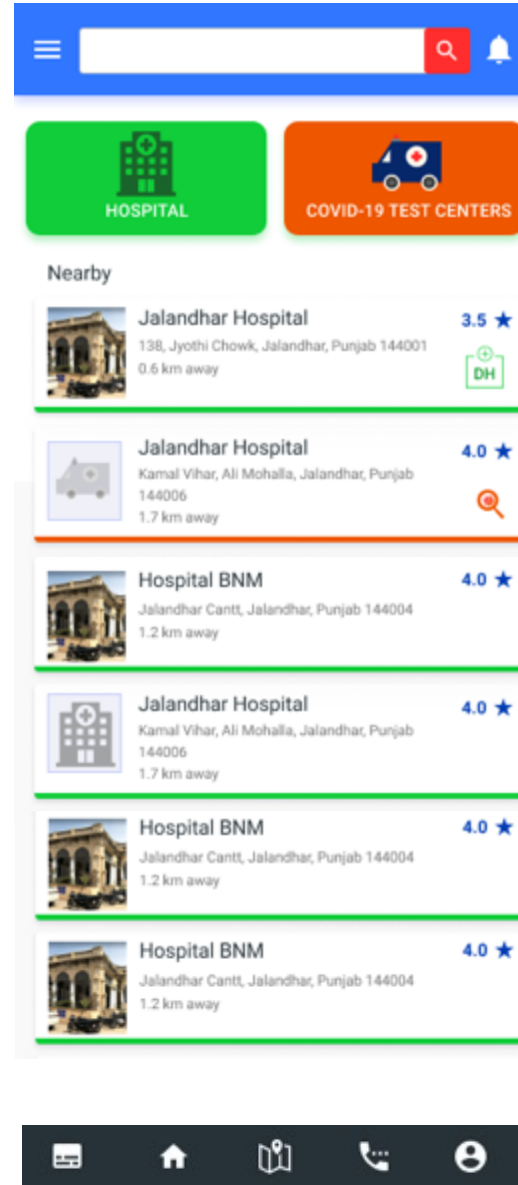

Map based Search:

Map based search shows distances and proximity to user

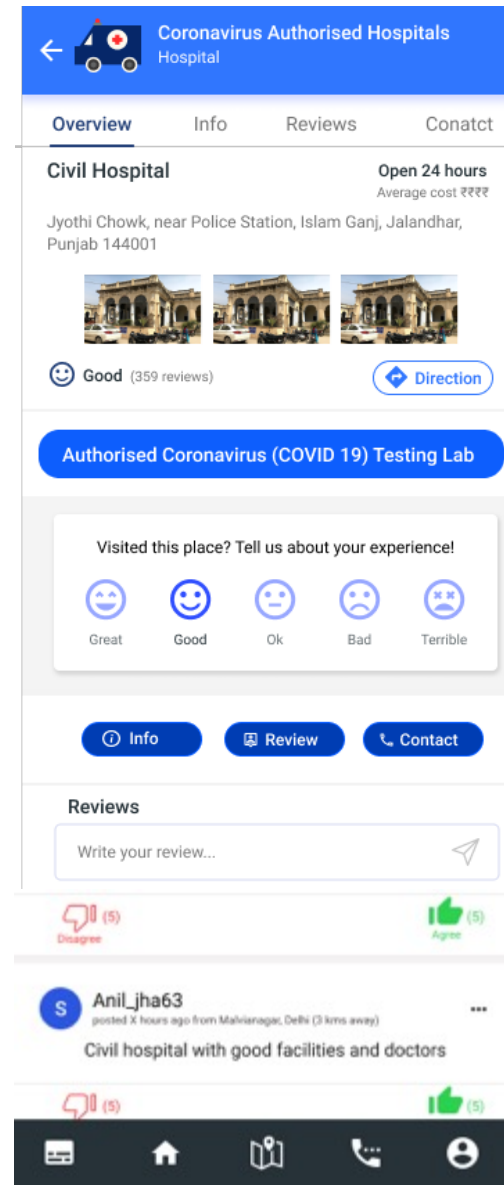

User Feedback:

Ability for user to provide feedback to administration about emergency services and problems faced through comments and ratings. Also peer to peer sharing of learning and availability through reviews.

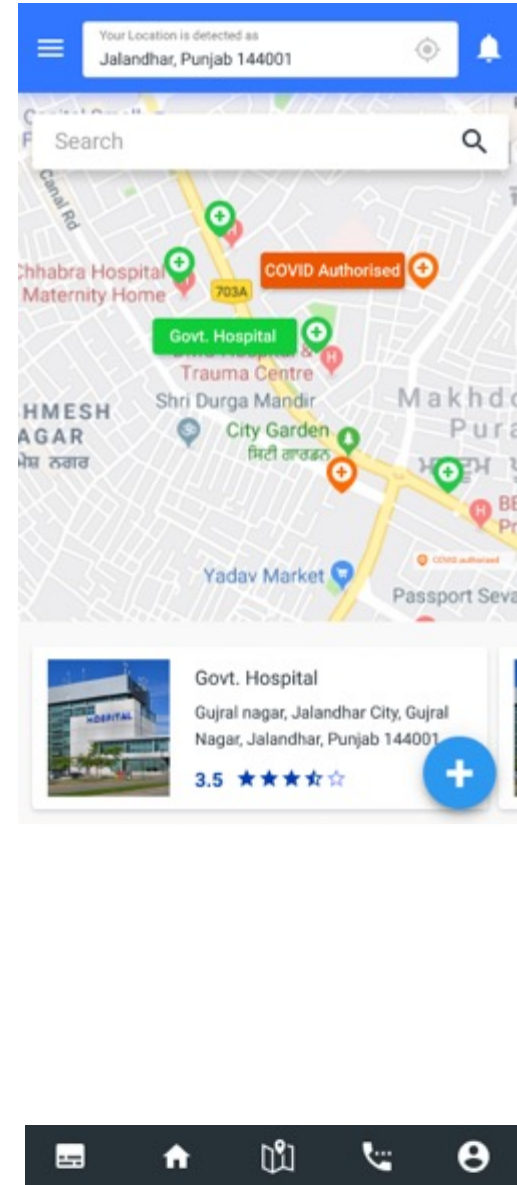

Local Search:

Entity Profile & Review:

Maps Search:

3. Disseminating important information and collecting user surveys

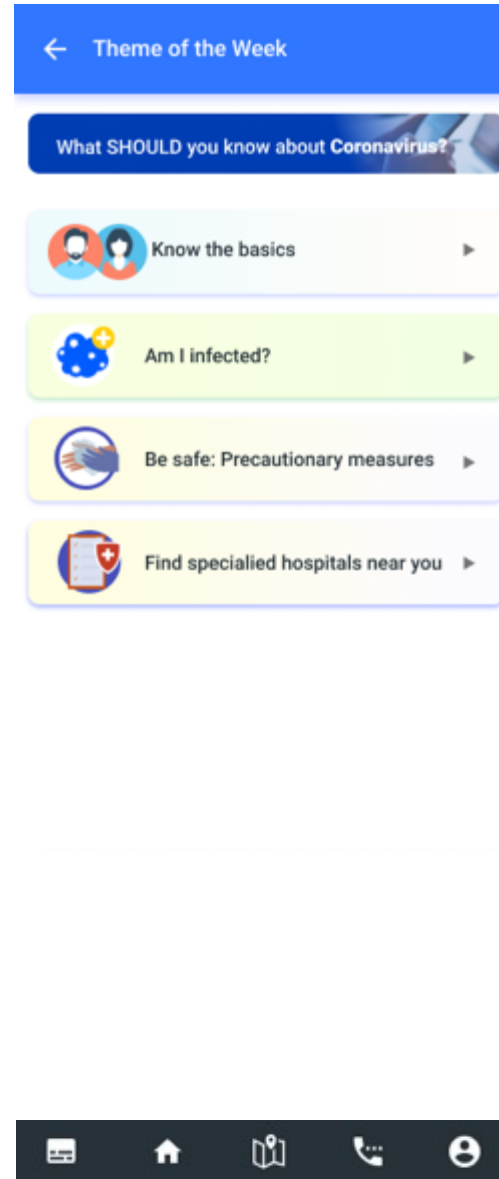

COVID 19 / Other Centers:

Special pages for disseminating key information and allowing user education with repository of links to definitive information sources to avoid misinformation.

Local Surveys:

Collecting survey from users that will allow for them to get immediate results (Am I infected quiz?) and also collect user information for local admin to take action. Surveys are automatically targeted to the specific region where survey is required from. So a DM can target his constituent to be surveyed.

COVID 19 Center:
