

IMPORATNCE OF ENVIRONMENTAL CONSERVATION

1) IMPORTANCE OF AGRICULTURE :

Conserving the environment with regard to agriculture, could mean preventing soil erosion, flooding and desertification and could help its citizens have something to eat. Unsustainable farming techniques & blatant use of chemical fertilizers, insecticides, and pesticides impact natural ecosystem thereby adversely impacting our environment.

2) IMPORTANCE TO FISHING :

The various bodies of water like oceans, lakes and seas are another source of essentials such as food. Marine Conservation is therefore vital in protecting human food supplies, human activities and marine animals.

3) IMPORTANCE TO THE CLIMATE :

Human activities have a direct impact on the climate and a subsequent effect on all life Global Warming, linked to Green house Gas emissions, which is an adverse effect on the climate results in droughts, floods rising Sea levels and cases of extreme heat and cold.

Conserving natural environments should be done to see these extreme outcomes reversed, making the world a better place.

4) EXCELLENT AIR/ WATER QUALITY :

Conservation measures ensure excellent quality of Air/Water for all. This, has social, environmental and economic benefits.

5) PRESERVES BIODIVERSITY :

A conserved environment preserves biodiversity. It preserves water and land- based ecosystem, preserves energy flow throughout the biosphere, provides for natural services, preserves food webs and boosts nature- based tourism.

6) PROTECTS WILDLIFE :

Environmental conservation prevents extinction of certain animal species. If the environment is destroyed, some animals are forced out of their habitat, making it hard for them to survive elsewhere. It could also bring about human and animal conflict, which ends disastrously for both species.

7) PROTECTS HUMAN HEALTH :

Environmental conservation will in then protects and improve human lives and health.
