Heat Leakage test	Heat leakage test should be determining the heat leakage of the thermal container shall be taken for a continuous period of not less than 8hrs, during which the following conditions shall be satisfied: a) The test shall be performed with a mean wall temperature chosen between 288 K and 298 K. b) A thermal mapping should be conducted for the Milk product storage chamber and the max. Temp. difference between the warmest and the coldest inside points at any one time should not be more than 1deg.C
Certificates of testing	All above mentioned test should be conducted through an approved laboratory by the Government of India and the equipment should be supplied along with the test certificates.

Physical dimensions mentioned above in the specifications should be approximated to +/- 5% variation.
