

# DISTRICT ADMINISTRATION HISAR

## MYTH 1

COVID-19 vaccines are unsafe because it was developed quickly.

## FACT

The authorized vaccines are proven safe & effective. Although they were developed in record time, they have gone through the same rigorous approval process as others.

# DISTRICT ADMINISTRATION HISAR

## MYTH 2

Vaccines should not be given to patients with blood pressure issues, diabetes, HIV, kidney problems, or cancer survivors.

## FACT

People with blood pressure issues, diabetes, HIV, kidney problems/cancer should be the 1st ones to be vaccinated on priority.

## MYTH 3

COVID-19 Vaccines can make you infertile.

## FACT

There is currently no evidence that any vaccines, including COVID-19 vaccines, cause fertility problems."

The benefits of getting vaccinated if you're pregnant or trying to become pregnant far outweigh the risks, because pregnancy puts a person at higher risk for severe Covid-19 illness.

# DISTRICT ADMINISTRATION HISAR

## MYTH 4

After getting the vaccination, I don't have to wear a mask or follow social distancing guidelines.

## FACT

Not True. The Ministry of Health and Family Welfare (MoHFW) has mandated preventive measures such as wearing masks and maintaining physical distance till the Covid-19 vaccine is administered to all. Moreover, it is not yet known for how long the vaccine-derived immunity will last, underscoring the importance of following Covid-19 Appropriate Behaviour.

## MYTH 5

I have already had COVID once; why vaccinate now?

## FACT

Those who have had COVID-19 in the past have no method to tell if reinfection of the COVID-19 virus will happen or not even if they have developed some natural immunity. So, it's important to take the vaccine.

# DISTRICT ADMINISTRATION HISAR

## MYTH 6

The vaccine is unsafe for girls who are menstruating.

## FACT

Vaccines and Immunity have nothing to do with Menstruation. Any female, in any stage of their menstrual cycle, can and should take the vaccine.

# DISTRICT ADMINISTRATION HISAR

## MYTH 7

The vaccine causes severe side effects.

## FACT

The severe side effects of COVID-19 are very rare. The vaccine causes mild side effects, like fever, shivering, pain on the site of vaccination, etc. that resolve on their own within a few days.

# DISTRICT ADMINISTRATION HISAR

## MYTH 8

If I receive the COVID-19 vaccine, I am at a greater risk to become sick from another illness

## FACT

There is no evidence to suggest that getting the vaccine heightens your risk to become sick from another infection such as the flu

#StayHomeStaySafe  
#HisarFightsCorona

# DISTRICT ADMINISTRATION HISAR

## MYTH 9

Covid-19 vaccine would give you Covid-19

## FACT

There is ZERO chance of this. All the vaccines being developed today against Covid-19 do not contain live coronavirus. However, we need to consider the fact that it takes a couple of weeks post-vaccination for the body to build its immunity against the virus.

And therefore, it is possible that a person could get infected just before or after being vaccinated so we must continue to follow safety precautions such as wearing masks, washing hands and maintaining social distance.

# DISTRICT ADMINISTRATION HISAR

## MYTH 10

I don't need 2 doses of vaccine. I am fit and physically active with a good immune system.

## FACT

Both doses of vaccines are needed for complete immunity. Being fit and physically active doesn't prevent COVID.
